SUMMARY

Full-stack engineer with hands-on experience in AI-native applications, skilled in LLM integrations, agentic systems, and real-time distributed architecture. Proficient in TypeScript, Node.js, and AWS, with expertise in building systems. Comfortable owning features end-to-end, from architecture to deployment, shipping production-ready systems independently.

EXPERIENCE

The Mist Blew Hotel, Sonari

Mar-Jun 2026

Full-Stack Developer

Sonari, Assam

- Built an internal **employee management system** for the hotel, handling staff records, role-based access, and daily operations for the internal team.
- Developed a **delivery application** from scratch since the hotel is located in a remote area where services like Zomato and Swiggy don't operate, enabling staff to manage daily local deliveries independently.
- Maintained and supported both systems **post-deployment**, shipping new features and fixes based on the hotel's evolving operational needs.

PROJECTS

ShopEasy Assistant – AI Customer Support Agent [Link](#)

2026

React, Vite, TypeScript, Node.js, Express, PostgreSQL, Prisma, Groq (Llama 3.3 70B)

- Built an AI-powered customer support chat agent for an e-commerce platform, integrating Groq's **Llama 3.3 70B** for real-time, low-latency responses.
- Designed a **session-based conversation system** with PostgreSQL persistence, restoring chat history across reloads via a **REST API**.
- Engineered the prompting strategy: system-level role definition, hardcoded FAQ context, and a sliding window of the **last 5 messages** to balance context and cost.

YouBid – Distributed Auction System [Link](#)

2026

Next.js, Hono, Redis, PostgreSQL, WebSockets, Docker, k6, Grafana

- Built a distributed real-time bidding platform delivering **sub-10ms price updates** via WebSockets and Redis Pub/Sub.
- Eliminated race conditions using atomic Redis Lua scripts, blocking **6,900+ conflicting bids** and guaranteeing database integrity.
- Stress-tested with a k6/Grafana observability pipeline; sustained 100 concurrent users, **590k+ messages/min**, and 2.14ms average latency.

BlinkChat – Real-Time Location-Based Chat [Link](#)

2026

Next.js, Node.js, Socket.io, Redis, AWS EC2, Docker

- Built geo-fenced chat rooms with a **2-hour message expiry** using a custom Redis TTL service.
- Leveraged Redis for **hot-data caching** and message queue management, keeping real-time latency low under concurrent load.
- Implemented cursor-based **infinite scroll pagination** and stateless auth via secure HttpOnly cookies.

SKILLS

AI/LLM	LLM Integrations, Agentic Systems, MCP, Agent Harnesses, RAG
Languages	TypeScript, JavaScript, SQL, Python, C
Frameworks/Libraries	React.js, Next.js, Node.js, Express.js, Hono, Prisma, Tailwind CSS
Infrastructure/DevOps	Docker, AWS (EC2), Redis, Cloudflare Workers, Vercel, Nginx, Git
Observability/Testing	k6, Grafana, Postman
Core Concepts	WebSockets, REST APIs, Pub/Sub, Serverless, JWT/OAuth, RBAC

EDUCATION

Central Institute of Technology, Kokrajhar

2020 – 2024

Bachelor of Technology in Computer Science & Engineering

CGPA: 8.33/10

ACHIEVEMENTS & TRAINING

- Completed 100xDevs Cohort 3, Full Stack Web Development & DevOps
